

Thermoplastic Welded Fittings

Bailiff Enterprises

Welded flanges and welded couplings provide secure fittings for plastic tanks without the need for gaskets. We use thermoplastic welding to fuse flanged or threaded fittings in a wide range of sizes.

Welded couplings are available in polyethylene and polypropylene. They are available in sizes from 1/2" to 4" in diameter. The 2" and 3" sizes are reinforced with a steel rim.

Welded flanges are available in polyethylene, polypropylene and PVDF. Sizes vary based on the material but polyethylene is available from 1/2" to 30" in diameter. Our flanges are ANSI 150# flanges. We use flat face flanges and Vanstone loose backing rings for easy fit-up to your pipes.

We custom fit tanks with the fittings, options and accessories our customers need. Contact us to see how we can help you.
