BOLTED FLANGES

Bolted flanges provide a secure way to attach pipes to a tank and are often used in industrial applications. They are usually made from PVC, CPVC, Polypropylene and Stainless Steel. Other metals and plastics are also available but are much less common. The normal criteria for selection are chemical compatibility for the application, the work setting and amount of abuse the fitting will receive, and the price.

Bolted Spool Flanges offer a secure connection to the tank and an extended flange face to use when attaching valves or pipes. Our PVC and CPVC spool flanges have loose flange rings on the extended flange to make it easier to connect to pipe or valve flanges.
